

CMPE/CMSE419 Term Assignment

You have to create a project that uses CanRisk informations to check the diabet risk of the users.

You should use questions available in the CanRisk questionnaire to design your android application and at the end of survey you should display the risk of the user by checking the points collected.

After you display the risk of the user you have to write “Gender” and “Risk” in to the file.

You ave to create two users : “Admin” and “User”.

If user of your Project selects “User” you have to start survey for him. If “Admin” selected you have to ask password and let admin to see:

- The number of users used your Project.
- The number of users in each risk Groups for Mail and Femail.

Due Date:25 May 2023.
